

PHONE CALL/CONVERSATION CONFIRMATION

CONTACT Paul Buhanan DATE October 1, 1991
PHONE NO. (801) 586-8626 OFFICE Fillmore/WSRA
SUBJECT Status of information requested to complete EA for
UT-055-91-02P, Plan of Operations

COMMENTS: I spoke with Mr. Paul Buhanan at approximately 3:15 pm on 10-01-91. During the conversation Mr. Buhanan stated that his exploration activities were currently down scaled from the earlier plan and consisted of collecting samples with hand tools along with blasting. His current estimate of the amount of material removed per week is under 50 lbs. Apparently the results of previous sampling did not indicate an economic deposit at this time. He intends to continue exploration in an effort to prove the existence of a minable deposit, and emphasized that the cabin is incident to his exploration activity.

I requested he update his activity with this office and supply information previously requested in a letter dated May 10, 1991. In particular (a) the precise claims he will be working under his plan (b) documentation by claim number indicating the manner and degree of his operations prior to October 21, 1976 (c) the scope, equipment and procedures involved in his operations as he now envisions them, along with a reclamation plan. Mr. Buhanan agreed to provide us with the above information.

I mentioned to him, that I would check to see how the current down scaling of operation would affect the EA in draft.
